

AeAnomalies Report

AeAnomalies Report - Software

This software allows the detection, analysis and management of dangerous objects for the power line being studied. The user can view and validate the detected anomalies and can export reports with the results in different formats.

Its main characteristics are:

App developed by
AEROLASER.

Import point clouds.

Manual validation of unverified anomalies.

Grouping of anomalies.

Export reports in various formats (HTML, KML, XLS)

Importing graphics in DXF format with the information of line and its poles.

Modification of the type of anomaly.

Calculation of the severity of the anomaly according to the distance to the cable.
